

Demonstration Session on Computer-Aided Design (CAD) for Fashion (4 April 2025)

A demonstration session on *Computer-Aided Design (CAD) for Fashion* was organized on 4 April 2025 for the students of Apparel Design and Construction (ADC). Conducted by experts from TUKAtech, the workshop aimed to introduce students to the applications of CAD technology in fashion design and garment production.

The session featured live demonstrations of 2D and 3D CAD tools, focusing on computer-aided pattern making, grading, and virtual garment simulation. Students gained valuable insights into how digital technologies enhance efficiency, reduce material wastage, and streamline the design and production process. The workshop also highlighted the growing role of CAD in the modern apparel industry and its relevance to fashion technology and design development.

An interactive question-and-answer session enabled students to learn about career opportunities, industry trends, and skill requirements in the field of fashion technology. The workshop was highly informative and well received, providing students with practical exposure to industry-relevant digital tools and strengthening their understanding of technology-driven fashion design.
