

Physics Department Showcases Innovation at the University of Delhi Flower Show (24th February 2026)

Bhagini Nivedita College marked its first participation in the University of Delhi Flower Show through the Garden Committee. The Department of Physics made a noteworthy contribution by presenting an innovative exhibit on essential oils extracted from herbal plants, developed under the Skill Enhancement Course – Plant Aromatics & Perfumery.

The exhibit, prepared by students of B.Sc. (Hons.) Physics, displayed laboratory-extracted essential oils along with information on their Ayurvedic significance and applications. The stall received an enthusiastic response from visitors, who actively interacted with the students, explored the exhibits, and appreciated their scientific approach and presentation skills.

The participation provided students with a valuable platform to demonstrate the practical application of scientific knowledge and showcase their innovative work before a wider audience.
